

Series 10-009

Cleaning and degreasing agent

This universal cleaner is ideal for removing all types of contamination without leaving residues. For example, it reliably dissolves migration substances from protective films and removes adhesive, film and grease residues from various plastics and metals.

The suitability for stress-sensitive substrates must be checked in each individual case, but is generally given.

Please note that when cleaning, saturation of the cloth with the removed paint occurs very quickly and thus the surface to be cleaned becomes soiled again.

Therefore, the cleaning agents should be changed promptly or disposable cloths should be used. In addition, care should always be taken to ensure a well-ventilated environment when cleaning.
